## Foreword

This handy document, Agriculture in Ghana: Facts and Figures, has been produced by the Statistics, Research and Information Directorate (SRID) of the Ministry of Food and Agriculture (MOFA). This 2009 document is the 19th edition since the commencement of the annual publication in 1991.

It is aimed at providing the salient features of the Ghanaian Agriculture in figures with focus on crops, livestock, fisheries and cocoa sub-sectors. The document also attempts to provide for stakeholders an easy reference on Ghana's agriculture and also its relation to the Ghanaian economy.

The Ministry of Food and Agriculture intends to provide quality, consistent and timely information on the agriculture sector for the formulation of sound development policies and plans so as to improve the efficiency of food production and distribution and thereby raising production, productivity, incomes and ultimately better livelihoods for farmers. It is expected that wider circulation and utilization of the materials and information in the document will assist accelerate the pace of agricultural growth and development in Ghana.

The Ministry of Food and Agriculture welcomes all comments, observations and suggestions that will help improve on the development, publication and dissemination of subsequent editions. These should be sent to:

The Director  
Statistics, Research and Information Directorate,

### Land Area by Region (%)

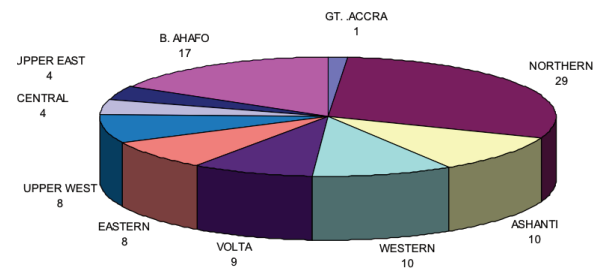

Fig. 1 (Based on Table 2.3)

## 2.4 Agro-ecological zones:

There are 5 main agro-ecological zones defined on the basis of climate, reflected by the natural vegetation and influenced by the soils. These are Rain Forest, Deciduous Forest, Transitional Zone, Coastal Savanna and Northern Savanna (Guinea and Sudan Savanna).

## 2.5 Rainfall Distribution by Agro-ecological zones

| Agro-ecological Zone     | Mean annual Rain (mm) | Growing Period (Days) |              |
|--------------------------|-----------------------|-----------------------|--------------|
|                          |                       | Major season          | Minor season |
| Rain Forest              | 2,200                 | 150—160               | 100          |
| Deciduous Forest         | 1,500                 | 150—160               | 90           |
| Transitional             | 1,300                 | 200—220               | 60           |
| Coastal                  | 800                   | 100—110               | 50           |
| <b>Northern Savanna:</b> |                       |                       |              |
| Guinea Savanna           | 1,100                 | 180—200               | *            |
| Sudan Savanna            | 1,100                 | 150—160               | *            |

Source: Meteorological Services Department, Accra.

\*Rainfall distribution is bimodal in the Forest, Transitional and Coastal Zones, giving a major and minor growing season; elsewhere (Guinea Savanna and Sudan Savanna), the unimodal distribution gives a single growing season.

## 2.6 Climate:

Tropical eastern coastal belt is warm and comparatively dry, the south west corner is hot and humid, the north is hot and dry. Annual average temperatures range from 26.1°C in places near the coast to 28.9°C in the extreme north. Temperatures can however move into the 40°C category. The highest temperatures are recorded in the Upper East Region, specifically at Navrongo (see page 7 for Regional Rainfall figures).

## 2.7 Topography:

The topography is predominantly undulating, with slopes less than 1%. Even though the slopes are gentle, about 70% of the country is subject to moderate to severe sheet and gully erosion.

## 2.8 Vegetation

| Vegetation Zone                    | Area ('000 sq.km.) | %             |
|------------------------------------|--------------------|---------------|
| Guinea Savanna Woodland            | 147.9              | 62.0          |
| <b>Deciduous Forest:</b>           |                    |               |
| - Celtis-Triplochiton Association  | 37.3               | 15.6          |
| - Antiaris Chlorophora Association | 27.0               | 11.3          |
| Rain/Deciduous Forest Eco-zone     | 8.4                | 3.5           |
| Rain Forest                        | 7.5                | 3.2           |
| Thicket and Grassland              | 4.5                | 1.9           |
| Sudan Savanna Woodland             | 1.9                | 0.8           |
| Swamp and Lagoonal Vegetation      | 1.3                | 0.6           |
| Others                             | 2.7                | 1.1           |
| <b>Total</b>                       | <b>238.5</b>       | <b>100.00</b> |

Source: Min. of Lands and Forestry, Accra

## 2.9 Soils :

The soils have predominantly light textured surface horizons in which sandy loams and loams are common. Lower soil horizons have slightly heavier textures varying from coarse sandy loams to clays. Heavier textured soils occur in many valley bottoms and in parts of the Accra Plains. Many soils contain abundant coarse materials either gravel and stone, or concretionary materials which affect their physical properties, particularly their water holding capacity.

## 2.10 Fertility Status of Soils in Some Regions

| Region                   | Soil pH | % Organic Matter | % Total Nitrogen | Available Phosphorus (mg/kg soil) | Available Calcium (mg/kg soil) |
|--------------------------|---------|------------------|------------------|-----------------------------------|--------------------------------|
| <i>Ashanti</i>           |         |                  |                  |                                   |                                |
| 1. Offinso-Ejura         | 5.3-7.8 | 1.5-3.0          | 0.2-0.3          | 0.12-12                           | 50-100                         |
| 2. Kwadaso Juaso, Obuasi | 4.3-7.0 | 1.5-3.0          | 0.1-0.2          | 0.12-12                           | 50-100                         |
| <i>Western</i>           | 3.8-7.1 | 1.03-5.7         | 0.06-5.4         | 0.35-11.25                        | 28-420                         |

## 2.11 Farming Systems

Agriculture is predominantly on a smallholder basis in Ghana. About 90% of farm holdings are less than 2 hectares in size, although there are some large farms and plantations, particularly for rubber, oil palm and coconut and to a lesser extent, rice, maize and pineapples. Main system of farming is traditional. The hoe and cutlass are the main farming tools. There is little mechanized farming, but bullock farming is practiced in some places, especially in the North. Agricultural production varies with the amount and distribution of rainfall. Soil factors are also important. Most food crop farms are intercropped. Mono cropping is mostly associated with larger-scale commercial farms.

## 4.0 Agricultural Output

### 4.1 Crop Sub-Sector

#### 4.1.1 Principal Agricultural Produce

**Industrial Crops:** Cocoa, Oil Palm, Coconut, Coffee, Cotton, Kola, Rubber.

**Starchy and Cereal Staples:** Cassava, Cocoyam, Yam, Maize, Rice, Millet, Sorghum, Plantain.

**Fruits and Vegetables:** Pineapple, Citrus, Banana, Cashew, Pawpaw, Mangoes, Tomato, Pepper, Okro, Egg Plant, Onion, Asian Vegetables.

#### 4.1.2 Area Planted to Selected Food Crops ('000 ha.)

| Crop         | 1999         | 2000         | 2001         | 2002         | 2003         | 2004         | 2005         | 2006         | 2007         | 2008         | 2009         |
|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|
| Maize        | 697          | 695          | 713          | 940          | 792          | 733          | 740          | 793          | 790          | 846          | 954          |
| Millet       | 186          | 208          | 193          | 198          | 207          | 182          | 185          | 200          | 163          | 182          | 187          |
| Rice         | 105          | 115          | 135          | 123          | 118          | 119          | 120          | 125          | 109          | 133          | 162          |
| Sorghum      | 312          | 289          | 329          | 337          | 346          | 298          | 305          | 320          | 208          | 276          | 267          |
| Cassava      | 640          | 660          | 726          | 794          | 807          | 784          | 750          | 790          | 801          | 840          | 886          |
| Cocoyam      | 372          | 247          | 262          | 282          | 227          | 270          | 255          | 260          | 258          | 252          | 225          |
| Plantain     | 253          | 244          | 265          | 277          | 286          | 281          | 290          | 299          | 305          | 312          | 325          |
| Yam          | 243          | 261          | 287          | 300          | 321          | 311          | 300          | 325          | 324          | 348          | 379          |

*Note:*  
Indicates yields that have been achieved in cases where more effective extension and use of recommended technologies have occurred. The dashes indicate crops for which no on-farm research findings were available as far as potential yields were concerned. Data on achievable yields have been revised in line with new findings by the Crop Research Institute.

#### 4.1.9 Estimated Levels of Per Capita Consumption of Selected Food Crops

| Commodity                  | Kg/head/year* |       |       |       |       |       |
|----------------------------|---------------|-------|-------|-------|-------|-------|
|                            | 1980          | 1985  | 1990  | 1995  | 2000  | 2005  |
| <b>Roots &amp; Tubers:</b> |               |       |       |       |       |       |

| Maize                      | 38.4          | 39.2  | 40.3  | 41.4  | 42.5  | 43.8  |
| Rice (milled)              | 12.4          | 12.7  | 13.3  | 13.9  | 14.5  | 15.1  |
| Millet                     | 8.5           | 9.4   | 5.1   | 12.6  | 9.0   | 6.4   |
| Sorghum                    | 13.0          | 14.4  | 9.3   | 21.7  | 14.8  | 10.1  |
| Wheat                      | -             | -     | -     | -     | 8.0   | 8.0   |
| <b>Fish</b>                | -             | -     | 23.6  | 24.2  | 27.0  | 30.2  |
| <b>Meat</b>                | -             | -     | 8.0   | 6.3   | 6.7   | 7.1   |

\*In the absence of a household consumption survey, these estimates have been based on food available for human consumption from both domestic and import sources. For meat, bush meat consumption of 40,000 Mt and import amounting to 20,000 Mt has been considered. Dashes indicate cells for which information was not available.

## 4.1.1.10 Food Balance Sheet (2009/2010)

| Type of Commodity      | Gross Biological Production (MT) | Available Total Domestic Production Available for Human Consumption* (MT) | Total Imports of Commodities (MT) | Total Exports of Commodities (MT) | Total Supply of Commodities (MT) | Per Capita Consumption (kg/Annum) | Estimated Net Consumption of Commodities (MT) | Net Deficit/ Surplus (MT) |
|------------------------|----------------------------------|---------------------------------------------------------------------------|-----------------------------------|-----------------------------------|----------------------------------|-----------------------------------|-----------------------------------------------|---------------------------|
| <b>CEREALS</b>         | <b>2,451,600</b>                 | <b>1,857,400</b>                                                          | <b>715,300</b>                    | <b>345</b>                        | <b>2,608,255</b>                 |                                   | <b>1,976,910</b>                              | <b>631,445</b>            |

Population (2009) = 24.02million

Source: SRD-MOFA

Notes: Estimated Population for 2009, based on 2000 census figure (18.9m) and a growth rate of 2.7% = 24.02 m.

\* 70% of Domestic production for maize and cassava; 87% for rice, millet and sorghum; 80% for yam; 95% for cocoyam; 90% for groundnuts; 85% for plantain and cowpea. Livestock feed, wastage and seed account for the discount.

Source: Bank of Ghana

\*Formerly known as SSB Bank Ltd.

In addition to the above indicated banks, there are some 116 Rural and Unit Banks operating in the rural and peri-urban setting engaged in deposit mobilization and loan/advances delivery. Again a number of Non-Bank Financial Institutions abound in Ghana. These are helping in various areas in the agricultural sector. For example, of the latter is the Export Finance Company Limited providing the following services:

- 1 Pre and Post-shipment Credit Schemes
- 2 Export Refinance Schemes
- 3 Export Credit Guarantee Scheme
- 4 Export Insurance Schemes and advisory service

|     |                                                                                                                                                                                                          |     |                                                                                                                                                                |     |                                                                                                                                                                                           |     |                                                                                                                                                                                                  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| S1  | Highly suitable areas for extensive mechanized cultivation of export and food crops, (cashew nut, sunflower, pineapples, maize corn, guinea corn, soybean, cassava, yam, cocoyam, plantain, beans etc.). | S2b | Crop suitability same as S2a above. Limitation to crop production may be due to either light or heavy textured soils.                                          | S4b | Soils may occur on upland or undulating of very steep slopes. Problem of soil erosion is predominant.                                                                                     | N1c | Terrace derived soils, which contain surface pebbles and an undurated subsoil horizon. Soils may be left to prevailing grass vegetation for rough grazing of livestock.                          |
| S1a | Highly suitable soils, non-gravelly medium to moderately heavy textured. Suitable for cocoa, coffee, black pepper, sweet berry, ginger, citrus, cocoyam, banana, rice, sugarcane and vegetables.         | S3  | Fairly suitable areas for the cultivation of crops such as maize, cassava, vegetables etc.                                                                     | S4c | Soil may be imperfectly drained sands to loamy sands developed over beach sand or may have clay pan beneath the topsoil. Sandy areas may be used for groundnut and tiger nut cultivation. | N1d | Soils dominated by ground water laterites rendering them imperfectly to poorly drained. May be developed for paddy rice cultivation or vegetation should be left for rough grazing by livestock. |
| S1b | Have same characteristics as S1a above, but are situated in Savanna-transition vegetation zone. These areas are suitable for soybean, maize, yams, guinea corn, millet and groundnuts.                   | S3a | May consist of heavy plastic clays mostly imperfectly to poorly drained soils good for mechanized irrigation of rice, sugarcane, vegetables, maize and millet. | S4d | Soils are mainly loose sands developed on coastal sand dunes. Suitable for coconut cultivation. May be mixed with organic manure for vegetable cultivation as in Anloga areas.            | N2  | Very unsuitable areas for crop production. Soils are very shallow, gravelly, occurring on steep to very slopes. Should be reserved for forestry, wildlife and watershed protection.              |
| S2  | Suitable areas for extensive mechanical cultivation of export and food crops.                                                                                                                            | S3b | Mostly alluvial soils suitable for maize, guinea corn and vegetables.                                                                                          | N1  | Unsuitable areas for upland arable and tree crops.                                                                                                                                        | D   | Very unsuitable areas for crop production. Soils are very saline and may be utilized for mining of edible salt.                                                                                  |
| S2a | Crop suitability same as S1. Limitation to crop production may be due to gravelly subsoil horizons.                                                                                                      | S3c | Includes gravelly and moderately shallow soils. Could be hand cultivated for cassava, vegetables and maize.                                                    | N1a | Predominantly poor to very poorly drained soils, which may be developed for rice, sugarcane and vegetables.                                                                               |     |                                                                                                                                                                                                  |
|     |                                                                                                                                                                                                          | S4  | Fairly to marginally suitable areas for the cultivation of crops.                                                                                              | N1b | Terrace derived alluvial soils, which are dominated by rounded pebbles rendering them unsuitable for mechanized agriculture. May be suitable for maize, cassava, pepper cultivation.      |     |                                                                                                                                                                                                  |
|     |                                                                                                                                                                                                          | S4a | Consist of gravelly, moderately shallow to shallow, imperfectly drained soils. Limited to hand cultivation of cassava, citrus, palm oil and mangoes.           |     |                                                                                                                                                                                           |     |                                                                                                                                                                                                  |

## Appendix 12

### Criteria for Estimating Domestic Meat Production

| Livestock | Off Take Rate (%) | Av. Livestock wt. (Kg) | Carcass (% of live animal wt.) | Carcass Wt. of Animal (Kg) |
|-----------|-------------------|------------------------|--------------------------------|----------------------------|
| Cattle    | 11                | 250                    | 50                             | 125                        |
| Sheep     | 30                | 25                     | 60                             | 15                         |
| Goats     | 30                | 22                     | 60                             | 13                         |
| Pigs      | 80                | 60                     | 70                             | 42                         |
| Poultry   | 80                | 1.3                    | 75                             | 1                          |

#### Criteria

**Meat Production (Mt)** = (Off Take Rate (%) x Estimated Population (Table 4.2.1 x Carcass Weight of Animal (kg)) / 1000

**Carcass Weight** = Average Livestock Weight (kg) x (%Carcass Wt) / 100

## Appendix 13

PRODUCTION OF SOME MAJOR CROPS IN GHANA, 1991 - 2009  
(FIGURES IN '000 MT)

| YEAR       | 1991   | 1992   | 1993   | 1994   | 1995   | 1996   | 1997   | 1998   | 1999   | 2000   | 2001   | 2002   | 2003    | 2004   | 2005   | 2006   | 2007    | 2008    | 2009    |
|------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|---------|--------|--------|--------|---------|---------|---------|
